Objectives

画面の目的 - Objectives

It's common for hotels in Japan to apply discounts for children guests. This screen allow hotel admins and managers to set up child types and prices.

Note: For bookings from TLL, the child type codes are fixed from A to D and cannot be deleted. Every hotels has at least these 4 child types. In addition, TLL linkage codes cannot be set for newly added child types. The default names of these child types are: 子供A, 子供B, 子供C, 子供D.

<input type="checkbox"/>	並び順	子供区分名	大人1名あたりの料金	連携コード
<input type="checkbox"/>	1	子供A	¥400	A
<input type="checkbox"/>	2	子供B	大人1名あたり料金の60%	B
<input type="checkbox"/>	3	子供C	¥2,000	C
<input type="checkbox"/>	4	子供D	¥3,000	D
<input type="checkbox"/>	5	赤ちゃん	¥4,000	
<input type="checkbox"/>	6	子供（ロフト付き）	大人1名あたり料金の50%	

Depends on the choice of pricing option of each type

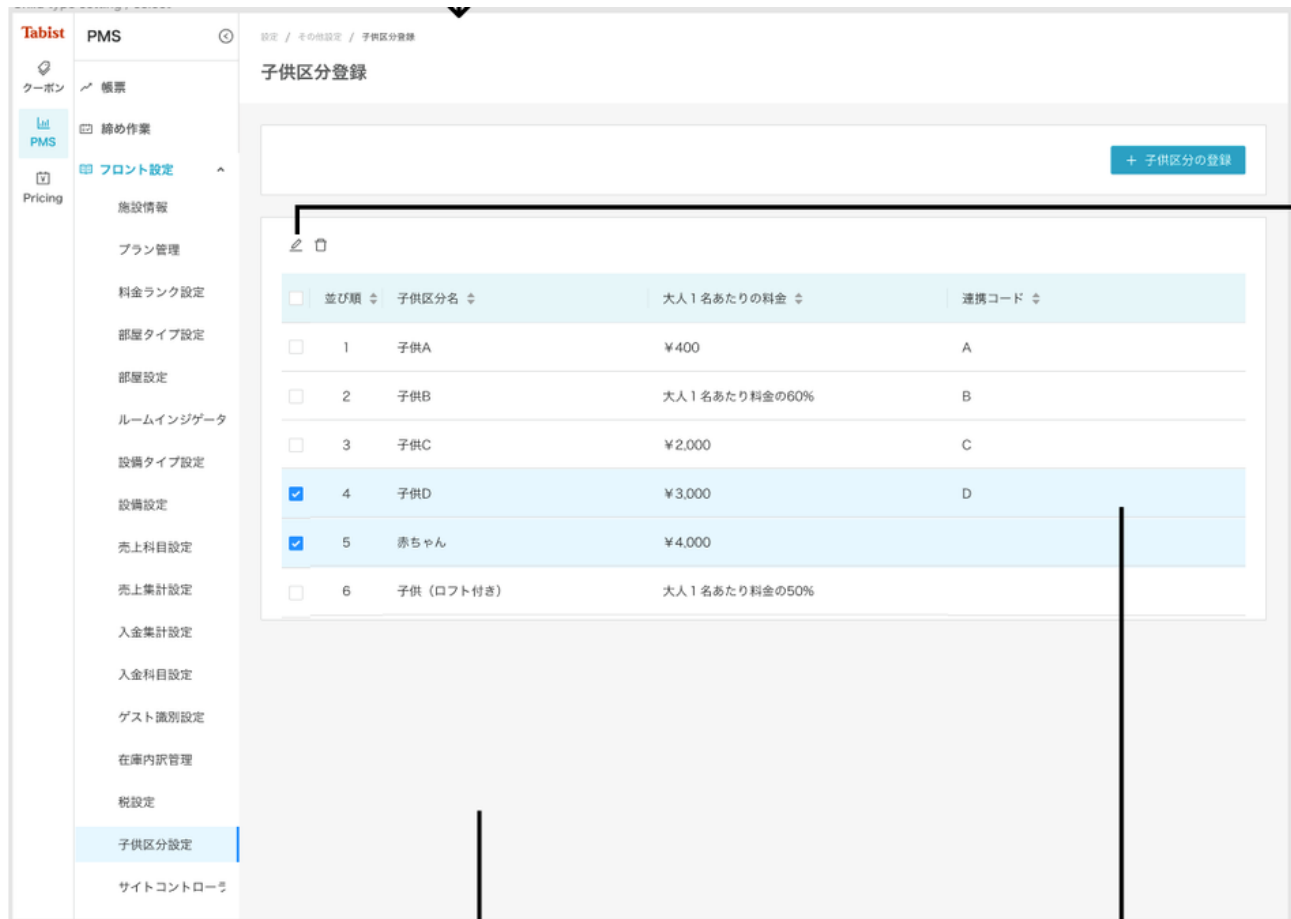

This screen shows the list of child types with following properties:

- Order number: auto generated. The system prevents user from creating more than 10 child types. Hence there is no pagination in this screen.
- Child type name: By default, there are 4 child types with names 子供A, 子供B, 子供C, 子供D which are editable.
- Price per adult: Will either display price per child or per adult guest, depending on the choice of pricing model of each type.
- Link code: This code is used to communicate with TLL. By default there are 4 child types with code A, B, C, D. These codes are view-only. Additional types do not have link code.

Clicking any row will open the detail view of that child type.

Clicking the blue button on top will open creation view of new child type.

Child type registration screen (selected state)

User can select one or many child types which will then display following options:

- Edit: Allow editing multiple child type together
- Delete: Allow deleting additional child types.

If user tries to delete any of default child types (A → D), display following error message:

“サイトコントローラ向けの子供区分は削除できません。”

or in English: “Cannot delete child types using for site controller.”

If user tries to delete additional child types, display following confirmation dialog and delete after user confirmed:

“子供区分を削除してもよろしいでしょうか？”

or in English: “Are you sure to delete this child type?”

After successfully delete the types, show a message:

“削除しました。”

or in English: “Successfully deleted.”

Otherwise, show the error message.

Creating additional child type

子供区分の登録

* 子供区分名

* 料金

大人/人 料金の %

Dropdown has following options:

- Price per adult -> this will be displayed in %
- Fixed -> this will be displayed in Yen

This choice will affect the way price is displayed in the child type list

ID	子供区分	子ども一人当たり
UK0001	子供 (シングル)	¥400
UK0002	子供 (ダブル)	大人1名あたり
UK0003	子供 (ツイン)	¥2,000
UK0004	子供 (ドミトリ)	¥3,000
UK0005	子供 (温泉付き部屋)	¥4,000
UK0006	子供 (ロフト付き)	大人1名あたり

A modal will be displayed after clicking the “Create” button from child type list screen.

The modal contains following elements:

- Child type name: this field follows validation rules of other name fields in PMS
- Price: This compound box consists of a dropdown, an input, and a unit field
 - The dropdown provide following options:
 - Price per adult: this is the default option. Selecting this will make the unit field to display in % and the input will be limit within 0-100%
 - Fixed: this option will change the unit field to Yen and the input can contain up to 5 digits.
- The Save button at the bottom will be enabled if all fields is keyed in.
- Cancel this modal with unsaved data will display a discard confirmation dialog with following message before returning to child type list screen:
 - “Are you sure to cancel this operation? All unsaved data will be discarded.”
